STORMWATER SERVICES

Storino Geomatics, PLLC offers the following Stormwater Services to support construction projects:

- Stormwater Pollution Prevention Plan (SWPPP) Preparation
- Erosion & Sediment Control Plan Preparation
- Notice of Intent (NOI/ENOI) Preparation
- Construction Site Inspection & Reporting
- Notice of Termination (NOT/ENOT) Preparation

INSPECTION SERVICES

Pursuant to the CGP, a stormwater inspection must occur weekly at construction projects that disturb one (1) or more acres of land. Construction projects disturbing greater than five (5) acres must be inspected two (2) times per week, separated by a minimum of two (2) full calendar days.

Storino Geomatics, PLLC qualified inspection staff conducts the onsite inspection and reporting for construction sites to ensure compliance with the CGP and site specific SWPPP. Weekly inspections with photographic documentation are completed and reported on Storino Geomatics, PLLC inspection forms certified by a CPESC or PE. This information is provided directly to clients weekly via electronic delivery and details the compliance or non-compliance of the construction site with the CGP and site specific SWPPP. Storino Geomatics, PLLC notifies clients of any discrepancies via the inspection report to assist in ensuring the project meets all requirements.

Additionally, should winter shutdown conditions (frozen ground with the site fully stabilized) be achieved, the inspection can become monthly, until those conditions no longer exist. Inspections are no longer required when the site is fully stabilized (80% or greater grass cover) as deemed appropriate by the qualified SWPPP Inspector in conjunction with the owner. At this time Storino Geomatics, PLLC can prepare the NOT for a client to submit to the NYSDEC and cease inspections.

DEDICATION • EXPERIENCE • TECHNOLOGY

Stormwater Services

*Providing Professional Land Surveying
Services & Consulting since 1993*

WHO WE ARE

A Foundation of Dedication, Experience, and Technology.

Storino Geomatics, PLLC is a professional land surveying, mapping and geospatial firm dedicated to providing direct, high quality, and timely professional services to the private and public sectors throughout the States of New York, New Jersey, Vermont and Pennsylvania. Since our founding in 2008, we have strived to maintain a standard of excellence in the communities we serve.

Building on combined professional experience surpassing 60 years, we have a deep passion and appreciation for our profession. We maintain a diverse, educated, trained and experienced team of professionals ready to meet your land surveying, mapping and geospatial needs. We strive to deliver exceptional professional services to our clients and our staff has the ability to provide an extensive variety of surveying services, solutions, and products. Our energetic professional staff is here to guide you and will go above and beyond to assist you in determining and understanding your project goals and needs. We take great pride in giving only realistic goals, quotes and time frames.

MISSION STATEMENT

We will strive to be the professional firm of choice by developing lasting successful partnerships, offering exceptional and modern professional services while maintaining a focus on client satisfaction. We will provide a timely, cost effective, quality product, which will surpass our clients’ expectations. If our clients’ are satisfied, we are successful.

STORMWATER REGULATIONS

Controlling construction stormwater runoff is critical as untreated runoff can significantly harm the environment and public health by carrying sediment and pollutants from construction sites into nearby waterways, potentially causing erosion, flooding, and damage to infrastructure while impacting aquatic life. Managing this issue through a Storm Water Pollution Prevention Plan (SWPPP) and regular inspections by a qualified professional is essential to protect both the construction site and surrounding properties.

Pursuant to Section 402 of the Clean Water Act (CWA), and 40 CFR 122.26(b)(14)(x), (15)(i), and (15)(ii), stormwater discharges from certain construction activities are unlawful unless they are authorized by a National Pollutant Discharge Elimination System (NPDES) permit or by a state permit program.

New York State administers the approved State Pollutant Discharge Elimination System (SPDES) program with permits issued in accordance with the New York State Environmental Conservation Law (ECL) Article 17, Titles 7 and 8, and Article 70, as well as 6 NYCRR Parts 621 and 750.

Construction activities constitute construction of a point source and, therefore, pursuant to ECL sections 17-0505, 17-0701, and 17-0803, the owner or operator must have coverage under a SPDES permit prior to commencement of construction activities. The owner or operator cannot wait until there is an actual discharge from the construction site to obtain permit coverage.

The New York State Department of Environmental Conservation (NYSDEC) utilizes the SPDES General Permit for Stormwater Discharges from Construction Activity Permit No. GP-0-25-001 (Construction General Permit or CGP) to enforce its

regulations. The CGP regulates construction activities that involve soil disturbances of one (1) or more acres of land, even if the area is not disturbed at the same time. Construction activities that require a CGP for a construction project disturbing one (1) or more acres of land include: clearing, grading, excavation, filling, demolition or stockpiling activities that result in soil disturbance. Clearing activities can include, but are not limited to, mechanized logging equipment operation, the cutting and skidding of trees, stump removal and/or brush root removal.

In order to obtain coverage under the CGP for a construction project, a Notice of Intent (NOI/ENOI) must be submitted to the NYSDEC for authorization and permit coverage. A SWPPP must be prepared according to CGP standards. A SWPPP is a project specific report, including construction drawings, that among other things: describes the construction activity(ies), identifies the potential sources of pollution at the construction site; describes and shows the stormwater controls that will be used to control the pollutants (i.e. erosion and sediment controls; for many projects, includes Stormwater Management Practices (SMPs)); and identifies procedures the owner or operator will implement, including inspection activities, to comply with the requirements of the CGP.

Determining when and if construction projects/activities require preparation of a SWPPP and stormwater inspections in New York State is an important part of the construction process. NYSDEC and the CGP provides lists of qualifying construction activities. The lists can be found in Tables 1 and 2 of Appendix B of the CGP, on pages 64 – 67.

During construction, site compliance stormwater inspections must be performed by a qualified inspector as defined by the CGP.

A qualified inspector is crucial for SWPPP inspections because they possess the necessary expertise to accurately assess whether erosion and sediment control measures are properly implemented and maintained on a construction site, ensuring compliance with environmental regulations, identifying potential violations, and recommending corrective actions, which ultimately protects water quality and minimizes environmental impact on the project site, to adjacent properties or any receiving waters.

If you have an existing or upcoming construction project that requires a CGP for Stormwater Discharges, we can assist with preparation of your SWPPP and or performance of SWPPP inspections as dictated by your existing SWPPP and the CGP.

PROFESSIONAL QUALIFICATIONS

Storino Geomatics, PLLC provides Construction Site Stormwater Services through Certified Professional in Erosion & Sediment Control (CPESC) certification supplemented by Professional Engineers (PE) when required.

Additionally, all of our qualified inspection staff are certified through NYSDEC Endorsed Four-Hour Erosion and Sediment Control (E&SC) Training.
